

applications *fraud*

introduction to *network science in Python* (*NetPy*)

Lovro Šubelj
University of Ljubljana
26th September 2024

fraud *insurance*

- *staged traffic accidents* with *false insurance claims*
- common characteristics of *staged crash schemes*

- $\approx 10\%$ of insurance claim outcome due to fraud
- ≈ 100 million € yearly loss in Slovenia due to fraud

fraud *detection*

1. *fraudulent* participants in traffic accidents

2. *analysis/mining* of participants metadata

3. *participants collaboration* as social network

4. *suspicious participants* by naked eye

* participants metadata from semi-structured police records

fraud *system*

1. *drivers, passengers & witnesses network*

2. *network connectivity around critical point*

3. *suspicious components vs random graphs*

4. *suspicious participants by link analysis*

[†] \approx 1500 accidents in Slovenia from period 1999-2008 [ŠFB11]
